**ON COORDINATION OF LAND MOBILE SERVICE AND BROADCASTING SERVICE  
IN THE 700 MHz FREQUENCY BAND**

After consideration of information in your letter as well as investigation of relevant interference scenarios we recognize that coordination between Land Mobile systems in Sweden and Broadcasting Service in Lithuania is not required for the frequency band 694–790 MHz.

Additionally we would like to note that amongst the channels which may cause interference to your uplink receivers of MFCN, channel 53 (726–734 MHz) is currently used for broadcasting service in the concerned KLAIPEDA region. Therefore, until the 700 MHz band is used for Broadcasting Service in our country we will not be able to provide protection for your Land Mobile systems to the extent greater than it is established due to operation of channel 53.
